

Metza Column Casings

The Metza column casing range is designed specifically for use with mezzanine floor installations to protect the supporting columns with a purpose designed fire resistant casing.

Manufactured using an outer skin of coated steel, lined with a dense fire resistant Rocksilk matting, Metza casings are extremely simple to fit around structural steelwork columns and provide up to 2 hours fire protection.

Normally supplied as a four-sided casing to fully encase a mezzanine's structural columns, the casings incorporate a 'U' shaped channel onto which the separate fourth side snaps and locks into place using an integral joint. To simplify fitting when working close to walls or where access is restricted, the casings can also be supplied as two interlocking 'L' shaped profiles.

Material thickness: 0.7mm

Standard length: up to 3650mm.

Longer lengths can be achieved using a jointing piece to link two column casings together

Finishes: PVC, PVF2, Plastisol, Galvanised and foodsafe white

K11 - 170 PREFORMED CASINGS:

Manufacturer:

Encasement Ltd, Suite 7, Papyrus Business Parc, Papyrus Road, Peterborough, PE2 5BH.
Tel: 01733 266 889.
