

Polyma (GRP) Column Casings

The Polyma is a glass reinforced polymer casing solution, which is suitable for both internal and external applications and possesses excellent resistance to weathering making it ideal for hostile environments.

A wide range of standard circular column casing sizes are available, but as Polyma casings are produced from a mould, this allows a high degree of versatility, enabling designers to specify custom shapes, sizes and surface finishes as well as a diverse range of RAL colours to meet the needs of specific projects.

Material thickness: 4mm

Standard length: 3000mm.

Longer lengths can be achieved using an inner collar to link two column casings together

Finishes: RAL or BS colour options

K11 - 170 PREFORMED PLYWOOD CASINGS:
